

The stacked bar chart, titled "gut", displays the relative abundance of 16S rRNA sequences across 16 samples, grouped into two categories: C (Control) and R (Resistant). The y-axis represents relative abundance from 0 to 1.0. A vertical dashed line separates the C and R groups. The C group includes samples C1.In through C8.In, and the R group includes samples R1.In through R8.In. The bars are composed of various colored segments representing different sequence clusters. The C1.In sample is dominated by a red segment, while the R7.In sample is dominated by a purple segment. The R8.In sample shows a high abundance of brown and pink segments. The R1.In through R6.In samples show a high abundance of grey segments. The R7.In sample shows a high abundance of purple and pink segments. The R8.In sample shows a high abundance of brown and pink segments.
